

Creating Custom Text Styles

You can create a custom text style by adding a new item to the Text Styles library, then defining settings such as the font, font style, text height and text color. When you add a text style to the Text Styles library, the style will be available for use in any project.

To create a custom text style:

1. Select **File > Catalogs > Library Manager**.
2. In the **Library Manager** dialog, select **Libraries > Text Styles**.

3. Select **Edit > Add Text Style**, or right-click in the *Text Styles* pane and select **Add Text Style**.
4. In the **Text Style Properties** dialog, type a name for the text style in the **Name** edit box.
5. Specify the following settings:
 - Font.** A set of text characters in a specific style and size.
 - Font Style.** The style of text. Choices can include Regular, *Italic*, **Bold**, and **Bold Italic** depending on the font selected.
 - Text Height.** The size of text on paper.
 - Text Color.** The color of text. Click the swatch to access the **Color** dialog and select a color.
6. Click **OK** in the **Text Style Properties** dialog.
7. Click **OK** in the **Library Manager**.
